

AMENDMENTS TO THE SPECIFICATION

Please amend the Abstract of the Disclosure as follows:

This object of the invention is to provide an An oil-in water emulsion cosmetic composition ~~having fine sense of~~ has a good feeling in use and excellent dispersion stability, and does not ~~occur twisting set~~ upon drying. ~~In advance, a hydrophobized A hydrophobized~~ powder is dispersed in an oil phase and processed with a wet type disperser ~~such as beads mill, dispersing solution is obtained~~ to obtain a dispersed solution. ~~And then said dispersing solution and a~~ A water phase is added thereto and ~~are~~ processed with a homomixer, to obtain an oil-in water emulsion composition having excellent ~~sense of use~~ usability and The powder is easily dispersed upon application to skin. ~~dispersibility of powder after applying to skin can be obtained. The dispersing stability of powder is extremely good by using a particular dispersant and a particular oil component. The dispersion stability of the powder is further improved, and the precipitation and creaming of the emulsion particle can be solved~~ eliminated by blending a thickener having salt tolerance. ~~Sticky A sticky feeling is eliminated~~ solved by using succinoglycan as a thickener, and ~~twisting settling is solved~~ eliminated -by plasticizing said succinoglycan.
